

Philosophy [in:of:for:and] Digital Knowledge Infrastructures

Workshop 2023

28 September 2023

In the realm of digitalising higher education and academic research, we can see significant progress across various humanities disciplines. Yet, philosophy lags notably behind in the digital domain. While some research delves into the philosophical aspects of digitalisation and its methodological benefits for philosophy, it remains still scarce compared to similar studies in other fields.

This virtual international workshop seeks to explore new philosophical perspectives regarding digital knowledge infrastructures, especially the philosophical consequences of integrating digital technology into research and education. It also aims to explore how philosophy can effectively harness such technology.

Organised by:

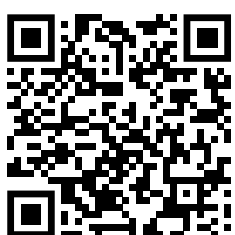

Frodo Podschwadek and Jonathan D. Geiger,
Academy of Sciences and Literature | Mainz

Speakers

- **Sangsu Kim**, Korea Military Academy
- **Stephan G. Humer**, Hochschule Fresenius Berlin
- **Roman Krzanowski**, Pontifical University of John Paul II in Kraków
- **Isaac Record**, Michigan State University
- **Boaz Miller**, Zefat Academic College

Keynotes

- **Marc Cheong**, University of Melbourne
- **Charles H. Pence**, Université Catholique de Louvain
